Bathurst RSL Selects Panorama AV for New TAB & Bar Refurbishment

Panorama Audio Visual has recently completed work on upgrading the Bathurst RSL's audio visual system as part of the Digger's Bar refurbishment and new TAB installation.

The work was carried out over three months in conjunction with Tableland's Builders, the primary contractor for the work.

Installation was carried out in three stages to avoid disruption to the club's operation and the Digger's Bar was open for business each evening during the refurbishment period.

The first phase of work was the relocation of the Club's three existing audio visual equipment racks to a new Comms Room area and providing the additional cabling required to connect this equipment. The relocated equipment included a MATV head end, satellite & video decoders, audio mixer & amplifiers, AMX control and advertising PC equipment. This was achieved with the Club's TV system only being offline for one morning.

The 2nd phase of work was the installation and commissioning of the club's new "state of the art" TAB sports bar. Panorama AV installed 36 new screens in the TAB area and provided coax, IR control and network cabling back to the new Comms Room. The club's AMX control system was reprogrammed to control the new screens. Ten of the screens display live high resolution Flexicast online racing information through an internet feed.

The final phase was the relocation of the club's existing large screen MPDP TV to a new position in the Digger's Bar. This required that each of the nine plasma screens be carefully dismantled and the mounting frame be removed and remounted on the new wall panel. It was also necessary to relocate the AMX control panel for this screen to a new position behind the bar.
